- `room_id` (query) — If provided, returns the single room with this ID
- `room_type_id` (query) —
- `status_filter` (query) —
- `is_freezed` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/rooms/{room_id}

PUT: Update Room

Description:

Tags: ROOMS

Parameters:

- room_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

DELETE: Delete Room

Description:

Tags: ROOMS

Parameters:

- room_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/amenities/

POST: Create Amenity

Description:

Tags: AMENITIES

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: Get Amenities

Description:

Tags: AMENITIES

Parameters:

- `amenity_id` (query) — If provided, return this amenity and its linked rooms

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/amenities/{amenity_id}

DELETE: Delete Amenity

Description:

Tags: AMENITIES

Parameters:

- `amenity_id` (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/room-amenities/

POST: Map Amenity

Description:

Tags: ROOM_AMENITIES

Request Body Example:**Responses:**

- 201 — Successful Response
- 422 — Validation Error

DELETE: Unmap Amenity

Description:

Tags: ROOM_AMENITIES

Parameters:

- `room_id` (query) —
- `amenity_id` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/room-amenities/room/{room_id}

GET: Get Amenities For Room

Description:

Tags: ROOM_AMENITIES

Parameters:

- room_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/rooms/{room_id}/images/

POST: Upload Image For Room

Description:

Tags: ROOM_IMAGES

Parameters:

- room_id (path) —

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List Images For Room

Description: Retrieve all images associated with a specific room.

Tags: ROOM_IMAGES

Parameters:

- `room_id` (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

Description:

Tags: OFFERS

Parameters:

- `limit` (query) —
- `offset` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/offers/{offer_id}

GET: Get Offer

Description:

Tags: OFFERS

Parameters:

- offer_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

PUT: Edit Offer

Description:

Tags: OFFERS

Parameters:

- offer_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

DELETE: Delete Offer

Description:

Tags: OFFERS

Parameters:

- offer_id (path) —

Responses:

- 204 — Successful Response
- 422 — Validation Error

/api/bookings/

POST: Create Booking

Description:

Tags: BOOKINGS

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: Get Bookings

Description: Unified GET for bookings.

- If requester is NOT a basic user and no query params are present -> return all bookings (paginated).
- If query params (booking_id/status) are provided -> perform query. Basic users are restricted to their own bookings (user_id from token).

- Basic users (role_id == 1) always receive only their own bookings.

Tags: BOOKINGS

Parameters:

- booking_id (query) —
- status (query) —
- limit (query) —
- offset (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/bookings/{booking_id}/cancel

POST: Cancel Booking

Description:

Tags: BOOKINGS

Parameters:

- booking_id (path) —

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

/api/bookings/{booking_id}

GET: Get Booking

Description:

Tags: BOOKINGS

Parameters:

- booking_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/wishlist/

GET: List Wishlist

Description:

Tags: WISHLIST

Responses:

- 200 — Successful Response

POST: Add Wishlist

Description:

Tags: WISHLIST

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

`/api/wishlist/item`

GET: Get Wishlist Item

Description: Retrieve a single wishlist entry for the current user by room_type_id or offer_id.

Tags: WISHLIST

Parameters:

- room_type_id (query) —
- offer_id (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

`/api/wishlist/{wishlist_id}`

DELETE: Delete Wishlist

Description:

Tags: WISHLIST

Parameters:

- wishlist_id (path) —

Responses:

- 204 — Successful Response
- 422 — Validation Error

/api/notifications/

POST: Create Notification

Description:

Tags: NOTIFICATIONS

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List Notifications

Description:

Tags: NOTIFICATIONS

Parameters:

- include_read (query) —
- include_deleted (query) —
- limit (query) —
- offset (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/notifications/{notification_id}/read

PUT: Mark Read

Description: Mark the authenticated user's notification as read.

Tags: NOTIFICATIONS

Parameters:

- notification_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

POST: Create Issue

Description:

Tags: ISSUES

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List My Issues

Description:

Tags: ISSUES

Parameters:

- `limit` (query) —
- `offset` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

`/api/issues/{issue_id}`

GET: Get My Issue

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

PUT: Update My Issue

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/issues/{issue_id}/chat

POST: Post Chat

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List Chats

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/issues/admin/

GET: Admin List Issues

Description:

Tags: ISSUES

Parameters:

- `limit` (query) —
- `offset` (query) —

Responses:

- `200` — Successful Response
- `422` — Validation Error

/api/issues/admin/{issue_id}

GET: Admin Get Issue

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Responses:

- `200` — Successful Response
- `422` — Validation Error

PUT: Admin Update Issue

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

`/api/issues/admin/{issue_id}/chat`

POST: Admin Post Chat

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: Admin List Chats

Description:

Tags: ISSUES

Parameters:

- `issue_id` (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/reviews/

POST: Create Review

Description:

Tags: REVIEWS

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List Or Get Reviews

Description: If `review_id` is provided return that single review (with images), otherwise return list (optionally filtered by `booking_id`).

Each returned review will include attached images in the `images` field.

Tags: REVIEWS

Parameters:

- `review_id` (query) —
- `booking_id` (query) —
- `room_id` (query) —
- `user_id` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/reviews/{review_id}/respond

PUT: Respond Review

Description:

Tags: REVIEWS

Parameters:

- review_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/reviews/{review_id}

PUT: Update Review

Description: Allow the authenticated reviewer to update their review's rating/comment.

Tags: REVIEWS

Parameters:

- review_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/reviews/{review_id}/images

POST: Add Review Image

Description: Upload one or more images for a review.

captions may be provided as repeated form fields (-F "captions=one" -F "captions=two") and will be applied to files by index. If there are fewer captions than files, remaining captions are None.

Tags: REVIEWS

Parameters:

- review_id (path) —

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

GET: List Review Images

Description:

Tags: REVIEWS

Parameters:

- review_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

DELETE: Delete Review Images

Description: Delete specified image ids attached to a review. Only the uploader/review-owner or ROOM_MANAGEMENT.WRITE may delete.

Caller must provide a list of image_ids (JSON body).

Tags: REVIEWS

- review_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/refunds/{refund_id}/transaction

PUT: Complete Refund

Description:

Tags: REFUNDS

Parameters:

- refund_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/refunds

GET: Get Refunds

Description: Unified GET for refunds.

Rules:

- If `refund_id` provided -> return that refund (basic users can only access their own).
- Basic users (`role_id == 1`) can only query their refunds (`user_id` derived from token).
- Non-basic users can query across all refunds. If no filters provided, return paginated list.

Tags: REFUNDS

Parameters:

- `refund_id` (query) —
- `booking_id` (query) —
- `user_id` (query) —
- `status` (query) —
- `type` (query) —
- `from_date` (query) —
- `to_date` (query) —
- `limit` (query) —
- `offset` (query) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/booking-edits/

POST: Create Booking Edit

Description: Create a booking edit request (customer initiated).

Tags: BOOKING-EDITS

Request Body Example:

Responses:

- 201 — Successful Response
- 422 — Validation Error

/booking-edits/active

GET: Get Active Booking Edit

Description: Fetch active edit for a booking.

Returns None if no edit is active (PENDING or AWAITING_CUSTOMER_RESPONSE).

Tags: BOOKING-EDITS

Parameters:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/booking-edits/{booking_id}

GET: Get All Booking Edits

Description: Retrieve all edits linked to a specific booking.

Tags: BOOKING-EDITS

Parameters:

- booking_id (path) —

Responses:

- 200 — Successful Response
- 422 — Validation Error

/booking-edits/{edit_id}/review

POST: Review Booking Edit

Description: Admin suggests room changes and locks them for 30 minutes.

Tags: BOOKING-EDITS

Parameters:

- edit_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/booking-edits/{edit_id}/decision

POST: Decision Booking Edit

Description: Customer accepts or rejects the admin-proposed edit.

Tags: BOOKING-EDITS

Parameters:

- edit_id (path) —

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/profile/

GET: Get My Profile

Description: Return the authenticated user's profile.

Tags: PROFILE

Responses:

- 200 — Successful Response

PUT: Update My Profile

Description: Update allowed profile fields. Accepts either JSON (application/json) or multipart/form-data (form fields).

This endpoint handles only scalar/profile fields. Image uploads must use the dedicated POST /api/profile/image endpoint.

Tags: PROFILE

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/profile/image

POST: Upload Profile Image

Description: Upload a profile image and set the user's profile_image_url.

Tags: PROFILE

Request Body Example:

Responses:

- 200 — Successful Response
- 422 — Validation Error

/api/profile/password

PUT: Change My Password

Description: Change current user's password by verifying current password.

Tags: PROFILE
